

PIIPS

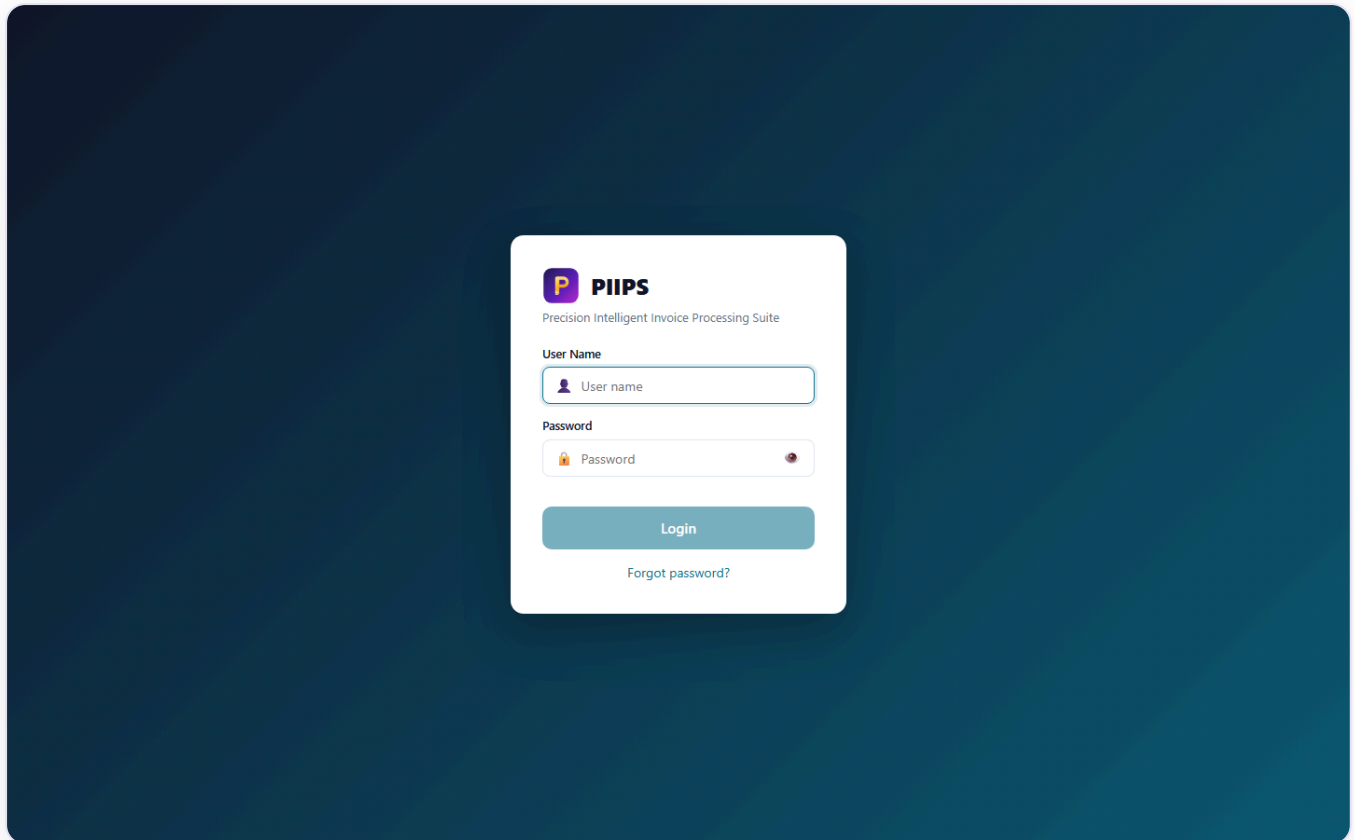

Precision Intelligent Invoice Processing Suite · v2.2

Role: User

A screen-by-screen guide to the invoice processing application,
covering exactly the screens available to your role.

Logging in

Open PIIPS in a browser and sign in with your username and password.

Type your username and password, then select **Login**. The password field has a show/hide (👁) button so you can check what you typed, and pasting into it is deliberately blocked — type it by hand so a copied value from the wrong place can't end up there unnoticed.

Forgotten your password? Select **Forgot password?** on the login screen (below). Nobody sets your password for you, including administrators — every password on PIIPS is system-generated and emailed to your official email address, and you're always required to choose your own on first use.

Already open elsewhere? PIIPS only keeps one copy of itself running at a time. Opening it in a second tab or window now shows a blocking **"PIIPS is already open"** screen there instead of the app — close or switch to the other tab, then select **Try Again** here.

Enter your username or email and submit. If an account matches, a new temporary password is emailed to it; the response is the same either way so the screen can't be used to check whether a username exists.

What each role can see

Only the screens listed below appear in your left-hand sidebar as a User - you will never see menu items outside this list, and the server enforces the same limits even if a screen were reached directly.

SCREEN	SECTION
Dashboard	Main
File Explorer	Main
Manual	Main
Invoice Search	Main
Buyer Order Entry	Review & Update
Vendor Code Entry	Review & Update
Part Description Mapping	Review & Update
Load	Review & Update

Setting your password the first time

The temporary password from your welcome email (or from a password reset) only gets you as far as this screen — you must choose your own password before doing anything else in PIIPS.

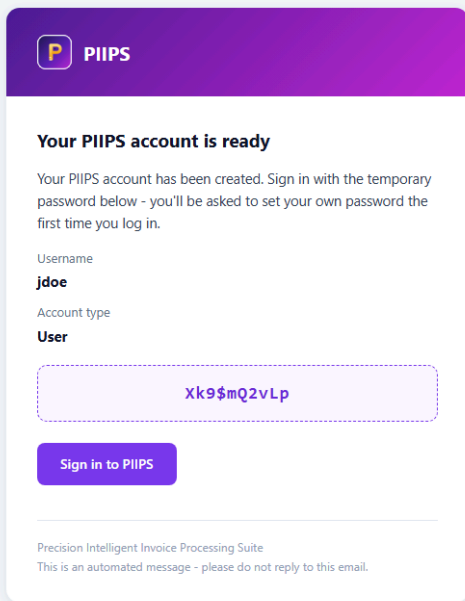

Enter the temporary password, then a new password meeting the policy shown on screen: **at least 5 characters, with an uppercase letter, a lowercase letter, a number, and a special character**. Select **Set password and continue** to enter the application.

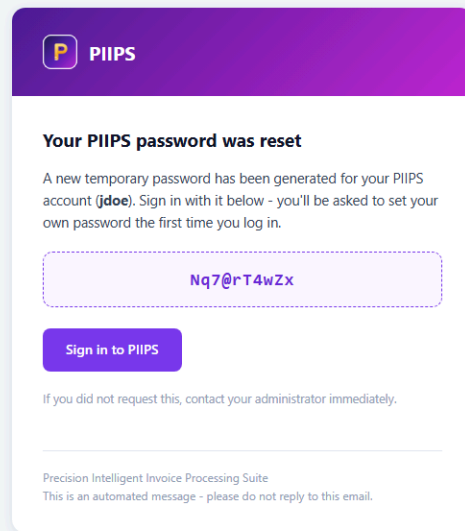

This same screen appears any time an administrator resets your password for you — a new temporary password is always emailed, and you always set your own replacement for it on your next sign-in.

What the emails look like

PIIPS emails you at three points: when your account is created, whenever your password is reset (by you via Forgot password, or by an administrator), and if your account's access is turned on or off.

The right-hand panels show a live count of every invoice PDF the system knows about — a total badge next to **Invoices by status** and **Status breakdown**, a status pie chart, and a per-status count list you can click to jump straight to that status's invoices. The bell icon (🔔) in the top bar opens any active site-wide announcement a Super Admin has published — a red dot means there's one you haven't opened yet.

Role: User

Page 4

File Explorer

Everything PIIPS currently knows about, by folder.

File Explorer lists the PDFs sitting in the working folders: newly-dropped invoices waiting to be processed, anything the system couldn't confidently match to a known vendor format (**Unsupported**), and anything it recognised but couldn't fully read (**Incomplete Data**) — including scanned or photocopied PDFs, which are routed here rather than guessed at. Open a file directly from the list to preview it.

Manual

This document, from inside the application.

Every signed-in user can download their own manual at any time — always the edition matching your role, and stamped with your username and the date/time you downloaded it. Super Admins additionally see the full Developer Manual and the UAT/Live Deployment Guide here.

Buyer Order Entry

Confirm or correct a purchase order number PIIPS matched (or couldn't match) against SPRPUR before an invoice can be Loaded.

PIIPS tries to detect the buyer's PO number on every invoice automatically, splitting matches into **confident** and **doubtful**. Use this screen to review doubtful matches, or to enter a PO number by hand when none was detected. Nothing reaches the Load step without a confirmed PO number.

Load

Bring a processed, PO-confirmed invoice into the system as a purchase record.

Loading is the first lifecycle step after extraction: it turns the extracted header/line/reservation data into a real Purchase record and moves the invoice's status to **LOADED**, ready for Accounts to Post.

What's New in v2.3

Role: User

The sections below cover every screen added or changed in this release, scoped to what your role can see.

Invoice Search: click-to-view and a new Details view

The file name in the results table is now itself the View link - click it to open the PDF viewer directly.

A new **Details** button (PART invoices only) opens every configured Purchase Header / Purchase Line / Reservation Entry field and its current value, organized into tabs. Every field is shown, including blank ones - nothing is hidden for being empty or optional. The Reservation tab is left out entirely when there's nothing to show there.
